Title : Reaction to Antibiotics. Nervous Disturbances
as a Result of the Administration of Treomycin.
Clinical and Experimental Investigations.

Orig Pub : Probl. terap., 1956, 3, 43-58

Abstract : Treomycin (1), a racemic derivative of chloroamphenicol, was prescribed for 127 patients ill with typhoid fever, dysentery, acute enterocolitis, and septicemia. The drug was administered in doses of 100 to 120 mg/kg, in all a total of 6 to 32 g in the course of the treatment. Symptoms of a condition of psycho-motor irritation was observed

Title : Application of Liquid Fertilizers in Apple Orchards
Situated on Turfed Slopes

Orig Pub : Gradina, via si livada, 1957, 6, No 7, 41-46

Abstract : The four-year test of the effect of fertilizers on the growth and yield of the Hard Gustav apple tree growing on turfed slopes showed that the unbroken plowing-in of manure (40 t/ha to the depth of 15-20 cm) and fractional introduction (according to the phases of vegetation) of the 25% manure liquid with injectors - are most effective. The fertilizers gave rise to a second wave of the growth of the shoots; they retarded the leaf drop (by 10-12 days), decreased the fruit drop and increased the yield at the expense of raising the amount of the fruit of the first grade. -- P.M. Kiskin

DUMRADZE D. N.

6980. DUMRADZE D. N. Therapeutic action of the product 'papirof' Sovjetskaya Meditsina, Moscow 1950, 2 (31-32)

The treatment of wounds and cutaneous afflictions in Ukrainian popular medicine is described. Paper is burnt and the residue is used before it becomes cold and solid. The author tried this resinous mass and found it to promote very quick healing in wounds, pyoderma, psoriasis, lichen planus villosi and other cutaneous afflictions. Chemical analysis showed that lower qualities of paper yielded Ca, C, H, Cl, S and silicic acid. Better qualities of paper yielded Cr, Mn, and Ag as well. Papirof is soluble in ethyl ether and in 9% ethyl alcohol, partly in distilled water. The bactericidal and sporecidal properties of papirof were confirmed in vitro. Successful trials were performed on the use of papirof for surgical purposes as a disinfectant for hands and for the operation site. The subject is undergoing intensive further experimental investigation. Raskova - Prague

TITLE: Bioelectromagnetic field

SOURCE: AN SSSR. Nauchnyy sovet po kompleksnov probleme Kibernetika. Bionika
(Bionics). Moscow, Izd-vo Nauka, 1965, 305-314

TOPIC TAGS: bioelectric phenomenon, neuron, nerve fiber, electromagnetic field

ABSTRACT: The authors set up a problem for determining the technical feasibility of measuring the electromagnetic field around an excited nerve fiber. The nerve fibers studied in this experiment are the sciatic nerve, the leg muscle, and the heart muscles of a frog. Three induction coils were used for measuring the emf of magnetic and electromagnetic fields. A two-channel symmetric amplifier was used for amplifying the signals from these coils. A schematic diagram is given for the apparatus. The assumed bioelectric low frequency field which excites and contracts the muscles and heart of a frog, with a sensitivity of 10^{-6} volts was not confirmed by the experimental data. An analysis of data

Card 1/2

L 34404-66

ACC NR: AT6009453

on bioelectric activity of individual nerve fibers and entire nerves shows that the sum magnetic flux around the nerve fiber and the entire nerve approaches zero. Under conditions of asymmetry of the paths which conduct the biocurrent, the flux of the electromagnetic field can be determined if the measurement apparatus used has a sensitivity of at least 2 orders higher than that used in this study. It is proposed that a study should be conducted on bioelectromagnetic quantum radiation emitted by living systems in the ultraviolet, visible, and infrared regions of the spectrum. These phenomena should be correlated with the bioelectric activity of the self-organizing living systems. Orig. art. has: 6 figures.

TITLE: Cliff-growing Decorative Campanulae of the Kazbeg
District (Skal'nyye dekorativnyye kolokol'chiki Kaz-
begskogo rayona)

PERIODICAL: Vestn. Tbilissk. botan. sada, 1956, Vol 63, pp 151-
156

ABSTRACT: A study of various Campanula species in their natural
habitat was begun in 1954. It was conducted so as to
discover which strains were most decorative, whether
they might be grown domestically, and how to treat
them under garden conditions. Succeeding investi-
gations were carried out on the most promising varie-
ties. Adaptation of a great variety of mountain
strains for alpinaria and rock gardens is extremely
interesting. There are 72 species of Campanula grow-
ing in the Caucasus, and 20 of them were found in the

Card 1/2

Cliff-growing Decorative Campanulae (Cont.)

regions covered by this investigation (centered in the Trusovskoye, Kasar and Snoyskoye ravines, and the valleys of the Chkheri, the Daryalskaya and Dzhariakhskaya Reki (Rivers). Of these 20 species, 14 deserve to be grown domestically. The article describes 12 cliff-growing Campanula species of the Kazbeg district of the Caucasus. These are: C. annae, C. andina, C. bellidifolia, C. ciliata, C. darialica, C. hipopollia, C. ochroleuca, C. ossetica, C. petrophilla C. saxifrage, C. sosnowskyi and C. sarmatica, which is native to Georgia. They are all perennials and bloom from May through September. The native habitat of each species is given. Two meadow-type Campanulae which grow high in the mountains are also described. These are: C. Grosshemi and C. tridens, both of which are native to the Caucasus. The article contains sketches and a bibliography of five titles.

TITLE: Neuroplegic and other pharmacological properties of methophenazine (frenolon)

SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 27, no. 1, 1965, 65-80

TOPIC TAGS: pharmacology, nervous system drug, rat

ABSTRACT: When administered orally or parenterally, the neuromuscular effects of methophenazine are 3-6 times as strong as those of chlorpromazine in regard to the inhibition of orientation and conditioned reflexes, cataleptogenic action, inhibition of amphetamine toxicity and inhibition of the central stimulating effect of amphetamine. It potentiates the analgesic action of morphine. Similarly to perphenazine and thio- propazate, it has a weaker hypothermic action than chlorpromazine in barbiturate anesthesia of rats. Its acute toxicity is considerably lower than that of the other three compounds mentioned. No detectable macroscopic or histological changes were produced after subacute and chronic use in rats and dogs. The results indicate that incorporation of the trimethoxyphenyl group into the perphenazine molecule did not change its phenothiazine character. As opposed to reserpine, methophenazine is a potent

adrenolytic and serotoninolytic agent. Several years of clinical trials support the pharmacological findings that it is a more effective, less toxic neuroleptic drug than chlorpromazine with less side effects. The authors thank Doctor F. Karsag and Doctor A. Szeky for cooperation in the investigations concerning chronic toxicity and the histological studies. Further thanks are given to Mrs. Zs. Anheuer, Mrs. K. E. Mariassy and Zs. Csizmadia for technical assistance. Orig. art. has: 3 figures and 9 tables. [Orig. art. in Eng.] [JPRS]
